

Excellent HR Aerial Imaging by PHT Airpicture

28. October 2015

PHT Airpicture was founded in 2010 by Peter Smiatek and Helmut Himmighofen. The enterprise rapidly grew to a promising company and established itself on the European market as essential service provider for drone-based aerial imaging in high quality.

Air pictures and more – exploit the drone potential as a team

So PHT Airpicture provided not only high-quality aerial imaging services itself. A solid partner concept should offer young, self-employed drone pioneers support in daily business – from order processing and client acquisition to various pilot training programs – to stand the market entry barriers. All in all the new micro UAV technology by Ascending Technologies and the special brand concept by PHT Airpicture should work quite well. Some of the aerial photographers and cinematographers like Peter Smiatek successfully work with the AscTec Falcon 8 and further flight systems for up to 6K cameras to this day.

Aerial Imaging – HR, HD or 6K?

Numerous customers from the tourism, transport, entertainment, and construction industry rely on the professional aerial imaging service. Take the [Movie Park](#), [Mercy Ships](#), [GLS](#), [SWR](#), [Engel&Völkers](#) to call only few examples. Due to their unique brand concept PHT Airpicture has offices in Mallorca, Catalonia and Germany. For aerials and extensive aerial imaging projects you can order a photographer, cinematographer, a micro UAV with HR imaging or HD film cameras up to 6K cinema format. PHT Airpicture will offer customized drone operation and aerial imaging services according to your requirements.

Showcases – aerial imaging applications by PHT Airpicture

Showcases 1 – Aerial HD imaging by PHT Airpicture: “Klosterfortencup”

About PHT Airpicture: By using the latest UAV technology combined with a first-class drone camera and video equipment and highly trained operators, PHT Airpicture offers customers new perspectives in contrast to traditional aerial photography using helicopters, flexible, and without much bureaucratic approval process. You observe with the on-line monitor and experience the most exciting camera work and spectacular views.

Please note: Ascending Technologies develops and produces multi-rotor and autopilot technology, but provides no service. For further information about UAV / drone-based survey and photogrammetry service, please directly contact PHT Airpicture:
